

Request for Information (RFI)

ISO/IEC 42001:2023 advisory, implementation, readiness, and certification support services

LatticePay Financial Technologies, Inc.

LatticePay is seeking market information from qualified firms that can help the company design, implement, operationalize, and prepare for certification of an Artificial Intelligence Management System (AIMS)

****NOTE:** This document is a fictional sample created as part of a portfolio for planning and procurement drafting. It is written as a realistic template that can be adapted to real-world use.

Issue Date	April 2, 2026
Company	LatticePay Financial Technologies, Inc.
Primary Contact	Procurement@Latticepay.example
Procurement Type	Professional services for AI management system implementation and certification support
Target Standard	ISO/IEC 42001:2023 Artificial Intelligence - Management system

1. Procurement overview

LatticePay is a fictional growth-stage fintech company that provides digital payments, merchant risk tools, embedded finance services, and AI-enabled operations tooling in North America and the United Kingdom. The company intends to mature its AI governance program and pursue certification to ISO/IEC 42001: 2023.

This RFI is intended to gather information about vendor capabilities, delivery models, relevant fintech experience, certification support boundaries, indicative timelines, and pricing approaches. Responses will be used to inform a shortlist and a subsequent Request for Proposal (RFP).

This RFI is not a commitment to award work, reimburse proposal costs, or enter into any agreement.

2. Company profile and operating context

Topic	Details
Business Profile	B2B and B2B2C fintech platform supporting card and ACH payments, merchant onboarding, fraud controls, underwriting decision support, and regulated customer operations
Employees	Approximately 850 employees, including engineering, data science, risk, compliance, operations, and customer support functions.
Geography	Primary operations in the United States and Canada, with limited service delivery and support functions in the United Kingdom
Technology environment	Cloud-native stack with a mix of internally developed machine learning services, third-party foundation model integrations vendor platforms, and conventional software systems
Current Compliance Posture	Mature security and privacy program with strong control discipline; AI governance capability exists but is not yet formalized as a certifiable management system
Representative AI use cases	Fraud scoring, underwriting decision support, KYC and document review, customer support copilots, engineering assistants, and operations triage for alerts and case routing

3. Objectives of the RFI

- Identify firms with demonstrable experience implementing or supporting ISO/IEC 42001 programs, especially within regulated or high-trust industries.
- Understand available delivery models, including gap assessment, control design, documentation support, implementation coaching, internal audit, and external certification readiness.
- Assess whether vendors can work effectively with a fintech operating model that includes both internally built and this-party AI-enabled solutions
- Clarify how vendors manage independence constraints when they also have relationships with certification bodies or affiliated audit entities.
- Estimate realistic timelines, team profiles, and pricing structures for an end-to-end engagement.

4. Information Requested from respondents

Please provide concise but complete responses to the topics below. Vendor brochures may be appended but the narrative response should stand on its own.

Category	What LatticePay Wants to Know
Vendor overview	Corporate history, ownership, legal entity, headquarters, service regions, and core service lines relevant to AI governance, management systems, risk, security, and compliance
Relevant experience	Number of ISO/IEC 42001 engagements completed or underway; examples in fintech, banking, payments, insurance or other regulated environments; and experience with ISO 27001-aligned programs.
Approach and methodology	How you would assess current state, define AIMS scope, conduct gap analysis, determine risk treatment priorities, design mandatory documentation, and support operationalization
Fintech and AI-specific capabilities	Experience with AI inventory, model governance, third-party AI oversight, human oversight controls, transparency practices, incident management, lifecycle controls, and performance monitoring.
Team composition	Roles, certifications, expected client

	responsibilities, and whether delivery is onshore, offshore, or blended
Artefacts and accelerators	Templates, control libraries, annex mapping tools, training content, risk registers, internal audit workpapers, dashboards, and reusable implementation assets.
Certification support boundary	How you support readiness without impairing certification independence, and how you coordinate with accredited certification bodies where applicable
Commercial model	Indicative pricing model, assumptions, rate card structure, milestone-based pricing options, travel assumptions, and any license or tool costs.
References	At least three references for similar projects, including industry, scope, duration, and contact information if available.

5. Key Procurement questions

#	Question	Format	Target Length
1	Describe your experience standing up to a certifiable AI management system rather than delivering a one-time governance assessment	Narrative	1-2 pages
2	How do you scope AI systems, functions, and business units for ISO/IEC 42001 in a mixed environment of internal models and third-party AI services?	Narrative	1 page
3	Which mandatory documents, records,	Narrative	1 page

	and operating evidence do you typically help clients establish?		
4	What is your recommended sequencing from gap assessment through Stage 1 and Stage 2 certification audit support?	Timeline	1 page
5	How do you approach AI risk assessment, control selection, human oversight, transparency, monitoring, and incident response?	Narrative	1-2 pages
6	Describe your internal audit methodology for AI management systems and whether you would lead auditors independent from implementation teams	Narrative	1 page
7	Provide indicative durations and team sizes for small, medium, and enterprise implementations.	Table	1 page
8	Explain any dependencies on client maturity, tool availability, executive sponsorship, or prior control frameworks such as ISO 27001 or SOC 2	Narrative	1 page
9	Provide a sample commercial model	Table	1 page

	with assumptions, exclusions, and optional services.		
--	--	--	--

6. Preliminary assumptions for planning

- LatticePay expects the selected partner to work collaboratively with legal, risk, privacy, security, engineering, data science, product, compliance, and internal audit stakeholders
- The company prefers an implementation approach that can leverage existing governance structures where practical rather than creating a standalone process stack disconnected from current operations.
- The engagement may require mapping AI governance activities to adjacent frameworks already familiar to the company, such as security controls, model risk concepts, privacy requirements, and regulatory obligations.
- Respondents should assume that some AI use cases are high-sensitivity because they may influence fraud decisions, onboarding outcomes, customer interactions, or regulatory operations.

7. Response Instructions

Requirement	Response/Confirmation
Submission format	Single PDF plus editable source files for tables or rate cards, if available
Page guidance	Main response should target 15-20 pages excluding appendices
Point of contact	Procurement@LatticePay.example
Questions from vendors	Submit clarification questions in writing no later than April 16 2026
RFI response due date	April 23, 2026 at 5:00 PM Eastern Time
Expected shortlist notification	Week of May 4 2026
Confidentiality	Mark proprietary content clearly; LatticePay will use reasonable efforts to preserve confidentiality

8. Evaluation factors for shortlisting

Criterion	Weight	What Good Looks Like
Relevant ISO/IEC 42001 experience	25%	Demonstrated, recent work building or supporting certifiable AIMS programs
Fintech and regulated-industry fit	20%	Experience with payments, lending, fraud, onboarding, or other regulated AI use cases
Methodology and practicality	20%	Clear, usable implementation approach with strong artefacts and realistic sequencing.
Team quality	15%	Depth of seniority, certifications, and independence between implementation and internal audit support where offered
Commercial reasonableness	10%	Transparent pricing structure and sound assumptions
References and market credibility	10%	Strong comparable references and evidence of successful outcomes

9. Important Conditions

- This RFI is exploratory and informal. Issuance does not obligate LatticePay to issue an RFP, select any respondent, or award any contract.
- Respondents must not state or imply that certification can be guaranteed. Certification, if pursued, must be awarded independently by a qualified certification body following its own audit procedures.
- Any respondent with certification-body affiliations, reseller arrangements or other relationships that could create independence should disclose them clearly.
- LatticePay reserves the right to modify the procurement schedule, request follow-up information, or reject any or all responses.

Appendix A: Recommended response template

Suggested Section	Expected Content
Executive summary	Summarize fit for LatticePay, relevant credentials, and suggested engagement model
Company profile	Ownership, locations, size, service regions, and practice areas.
Relevant case studies	At least three examples with scope, outcomes, client profile and role of your team
Methodology	Describe each phase, typical inputs, and client responsibilities
Team and governance	Named or representative roles, certifications, escalation model, and QA approach
Commercial model	Indicative estimates assumptions, exclusions, and optional services.
References	Reference list or approach for providing references during shortlisting.
